

Technical backbone

Anita Hendriks, Remy Rousch, Angela Thomissen, Frans Einerhand, Theo Depondt and Ron Rienstra

The Researchers and Developers:

- take great care in health and environment issues
- produce detailed competitor analysis
- work together with universities and branch companies
- own an up to date database of technical market information
- support sales with all necessary technical specs
- offer a personal contact person for each customer
- work according to ISO certifications

R&D and Laboratory

R&D and Laboratory can be seen as the technical chain within the sales process.

However, its technical backup is essential throughout the whole production process. R&D and Laboratory informs other internal departments as well as external market parties such as customers and various suppliers.

Experience trough time

Rubber Resources' recycling activities began nearly 50 years ago in Maastricht, the Netherlands. Across five decades of recycling, the R&D and Laboratory department was involved in many more different and complex processes, and it was during this period that R&D and Laboratory learned to cope with a wide range of technical subjects. Today all parties from production process to customers can benefit from this broad experience.

Precision tools

R&D and Laboratory in Maastricht is well known for its state-of-the-art equipment. A range of precise testing and measuring gear provides the most demanding customer with specific technical answers.
